

Does SweetPro contain Bio-Mos?

This is a very important question because **Bio-Mos** is a very well known and good product. I have very good news for you on this. While SweetPro does not include the brand name **Bio-Mos**, all SweetPro and EquiPride/EquiLix have this component naturally plus so much more in the digestive aid **ProBioTein**. I will give you a breakdown of how **Bio-Mos** and **ProBioTein** compare.

Bio-Mos has the following in it:

- Prebiotic oligosaccharide called Mannan or MOS

ProBioTein has the following in it:

- Prebiotic oligosaccharide called Mannan or MOS
- Prebiotic oligosaccharide called Xylo or XOS
- Prebiotic oligosaccharide called Fructo or FOS
- Prebiotic oligosaccharide called Arabinoxylol or AXOS
- Amylolytic digestive enzyme which helps digest starches & sugars
- Fibrolytic digestive enzyme which helps digest fiber
- Phospholytic digestive enzyme which helps digest minerals
- Proteolytic digestive enzyme which helps digest proteins in forage and feed
- Flax factor Omega 3 & lignans with antioxidant properties & improves immune function
- Amino acid broad profile using protein isolates from Oats, Wheat, Barley and Flax which helps maximize digestive efficiency

Amaferm or **Vita Ferm** are a couple more well known and good products made by BioZyme you may come across. Once again I have good news for you.

Amaferm & Vita Ferm have the following:

- Aspergillus Oryzae which helps in the digestion of fiber in feed

SweetPro/EquiPride/EquiLix have the following:

- Aspergillus Oryzae which helps in the digestion of fiber in feed PLUS everything above

I know it is a lot of information but SweetPro/EquiLix/EquiPride are the only products with **ProBioTein** and **ProBioTein** is in a class of its own at this point when it comes to digestive additives.
